Item	15 slots	16 slots
No. of slots per frame	15	16
No. of N_{pilot} per slot	1) Uplink 2, 3, 4, 5, 6, 7, 8 2) Downlink 2, 4, 8, 16	1) Uplink 5, 6, 7, 8 2) Downlink 4, 8, 16, 32
Slot-Slot possible ?	Yes	Yes
Double-check possible?	Yes (Two correltors such as auto-correlator and cross-correlator are used)	Yes (Auto-correlator)
Single frame synchronization word can be used for frame synchronization ?	Yes since a frame synchronization word has –1 out-of-phase coefficients.	May not be feasible because of +4 or –4 out-of-phase coefficients. The +4 or –4 side lobes can be zero through some particular processing using preferred pair of frame synchronization words.
Frame syncrhonzation words	All 8 frame synchronization words are made out of a single PN code	All 8 frame synchronization words have +4 or –4 out-of-phase coefficient and minus peak value at middle shift.
Autocorrelation function	$R(\tau)=15$, $\tau=0$ $R(\tau)=-1$, elsewhere	$R(\tau)=16$, $\tau=0$ $R(\tau)=-16$, $\tau=8$ $R(\tau)=0,+4$, or -4, elsewhere
